

The Big Picture

- ❖ Reduce manual tasks required to establish coexistence during migrations.
- ❖ Supports Exchange 2000, 2003, 2007, and 2010.
- ❖ Replicates users, contacts, and distribution groups.
- ❖ Complete control over objects and attributes that are replicated.
- ❖ Correctly provisions objects in support of a coexisted Exchange migration.
- ❖ Works perfectly with the Priasoft Migration Suite for Exchange to provide a complete solution during coexisted Exchange migrations.

Priasoft Collaboration Suite for Microsoft Exchange.

Business Challenge

Often during an Exchange migration project you are required to coexist two or more Exchange environments due to size or for logistical purposes. Generally, this requires a complete global address list (GAL); including calendar free/busy information, on both the source and target environments during the coexistence period. In order to maintain a complete GAL, and allow users to work without interruption, you will need to establish users, contacts, and distribution groups during the migration. The Priasoft Collaboration Suite is designed to allow you complete control of this "GAL synchronization" process.

Collaboration and GAL Synchronization between Organizations

Priasoft Collaboration Suite for Microsoft Exchange enables the synchronization of Global Address Lists (GALs) between Exchange organizations during migration. Its powerful automation features provide a transparent collaboration process. Whether you need time to properly plan for your upcoming Exchange migration, or you have multiple Exchange forests that need to exchange GAL information, Collaboration Suite can improve your productivity.

Benefits and advantages:

- Synchronize Exchange GALs and enable Free/Busy between forests when co-existence is required
- Supports Exchange enabled contacts, users, and groups. You can choose how these objects are provisioned in the target forest. Target objects types are:
 - a. Mail-enabled users
 - b. Mailbox-enabled users
 - c. Mailbox-enabled Linked users
 - d. Contacts
 - e. Mail-enabled Security and distribution groups

Flexibility - Exercise Complete Administrative Control

You decide which objects and attributes to make available. Automation to eliminate the redundant tasks required to manually synchronize GAL information. Collaboration Suite allows you to maintain productivity organization-wide by providing up-to-date GAL and enable free/busy information to every end user.

Ease Migration Concerns

Exchange migrations require careful planning. Collaboration Services resolves many of the communication challenges inherent during this complex process and allows users to operate from a common GAL.
